

CRM / Client Management Dashboard UI

Project Overview

This project is a web-based CRM dashboard designed for a digital agency with 5 team members managing 30+ clients.

The goal is to centralize:

- Lead tracking
 - Client management
 - Follow-ups
 - Task planning
- into a single, efficient interface.

Problem Statement

Small agencies typically rely on:

- Spreadsheets
- WhatsApp communication
- Disconnected tools

This leads to:

- Missed follow-ups
- Poor visibility of leads
- Inefficient task tracking
- Weak client experience

Solution

A centralized CRM dashboard that enables:

- Visual tracking of leads across stages
- Clear overview of active clients
- Structured task and follow-up system
- Quick understanding of business performance

Target Users

1. Agency Owner

- Needs high-level overview
- Tracks revenue, leads, and performance

2. Team Members

- Manage leads
- Update pipeline
- Track tasks and follow-ups

Workflow Logic

The system is designed around a lead lifecycle:

New → Contacted → Qualified → Converted

Flow Explanation:

- New → Incoming leads
- Contacted → Initial communication done
- Qualified → Interested and viable leads
- Converted → Became paying clients

This pipeline ensures:

- No lead is lost
- Clear status tracking
- Better conversion management

Key Features & UI Decisions

1. Dashboard Overview (KPI Cards)

Displays:

- Total Leads

- Active Clients
- Revenue
- Tasks Due

Why:

Provides quick insights for decision-making without navigating deeper.

2. Lead Pipeline (Kanban Board)

A visual board with columns:

- New
- Contacted
- Qualified
- Converted

Why:

- Improves visibility of lead progress
- Enables drag-and-track workflow
- Matches real SaaS CRM tools (like HubSpot, Pipedrive)

3. Lead Cards

Each card contains:

- Client name
- Service requirement
- Deal value
- Time info

Why:

Keeps information minimal but actionable.

4. Clients List Page

A structured table including:

- Client details
- Contact info
- Status
- Actions

Why:

- Supports bulk management
- Easier data scanning
- Standard pattern in SaaS products

5. Task & Activity Tracking

Includes:

- Upcoming tasks
- Recent activity

Why:

- Prevents missed follow-ups
- Keeps team aligned on actions

UX Design Principles Applied

1. Clarity Over Complexity

- Clean layout
- Minimal visual noise

2. Visual Hierarchy

- KPI cards at top
- Pipeline in center
- Supporting data below

3. Consistency

- Uniform spacing

- Repeated card patterns
- Predictable navigation

4. Scalability

- Layout supports increasing data
- Table and pipeline expand easily

5. Efficiency

- Reduces clicks
- Key data visible at a glance

Tools Used

- Figma (UI Design)
- React for UI implementation

Key Outcome

This dashboard helps agencies:

- Track leads efficiently
- Improve conversion rates
- Manage clients systematically
- Avoid missed follow-ups

Conclusion

This project demonstrates:

- Real-world SaaS dashboard design
- Workflow-based UX thinking
- Scalable UI structure

It is aligned with modern CRM tools used in B2B SaaS products
